The Technical and Informational Monthly for the Coin-Operated Entertainment Industry

STAR TECH JOURNAL has been reporting the technical side of coin-operated games since 1979 when electronics first entered the arcades (remember TTL and flip-flops?). More than 25 years later we are still reporting on trouble areas, fixes, modifications and upgrades to the coin-op industry.

Troubleshooting the various makes and models of video monitors has never been easier. In *The Ultimate Monitor Repair Guide*, under each monitor model, the symptoms are listed and which component to change, nothing could be simpler. No special test equipment or knowledge required to perform these repairs other than basic shop skills and normal safety procedures.

Even the most obscure problems are addressed for monitors used in today's coin-operated games.

Each monitor model has a high-resolution photo of the chassis for identification and component locations. Followed by the symptoms and the cures. Thousands of monitor repairs have been logged and this tech manual is the cumulative

result of those successful troubleshooting journals. Fixes and mfg/model notes by leading industry service tech, Joe McNicol of Jomac Pty Ltd.

The *Ultimate Monitor Repair Guide* is available online for immediate download in the Star Tech Store on Star Tech Journal's website:
